SUPPLEMENTAL EXAMINERS AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 35, 37 and 39 all depend from claim 43. The claims are renumbered so that claim 43 will become new claim 16 and claims 35-39 will be renumbered 17-21.

This supplemental action is made solely to correct this numbering error.

2. The following is an examiner's statement of reasons for allowance: The currently claimed invention is novel and unobvious over the prior art of Zuidam and Gee since there is no teaching in these references that binding to a surface with a pH or potential sensitive fluorophore that is stably associated with the surface. The current claims all require such a stable association (going so far as to require a covalent association in claim 43) and therefore are novel and unobvious over the prior art of Zuidam who lacks such as stable association of the fluorophore with the surface. With regard to the enablement issue, the second Barenholz declaration persuasive demonstrates that the method is not limited to lipid based surfaces, showing an albumin surface interacting with PEI and polylysine as having the same properties. This demonstration of additional species that are significantly different from the lipid based surfaces supports the more generic claims. Therefore, the claimed invention is allowed.
